## Poverty and Student Achievement

*Compared with students in low-poverty public schools, students in high-poverty public schools have lower achievement scores in 4<sup>th</sup>-grade mathematics.*

The National Assessment of Educational Progress (NAEP) collects background information on students, teachers, and schools, permitting analysis of student achievement relative to the poverty level of public schools, measured as the percentage of students eligible for free or reduced-price lunch. In 2000, higher levels of students eligible for subsidized lunch were generally associated with lower scores on the 4<sup>th</sup>-grade mathematics assessment. Students in schools with more than 50 percent of their students eligible for free or reduced-price lunch had a lower average score than students in schools with a quarter or fewer of their students eligible for the program (see supplemental table 11-1).

Was there a difference in the mathematics achievement of 4<sup>th</sup>-graders in 2000 in high and low poverty schools regardless of whether or not the student was personally eligible for subsidized lunch? Among students who were not personally eligible for the school lunch program, students in schools with more than 50 percent of their students eligible for the program had a lower average score than those in schools with a quarter or fewer eligible. Among those eligible for

the school lunch program, the average score of students in schools with more than 75 percent of students eligible was lower than the score for those in schools with 11–50 percent of students eligible.

Certain characteristics of the highest poverty schools (more than 75 percent of students eligible for subsidized lunch) are evident. Relative to the total 4<sup>th</sup>-grade population, there was a lower percentage of White students and a higher percentage of Black and Hispanic students in the highest poverty schools. The highest poverty schools had higher rates of student absenteeism and a lower percentage of their students with a “very positive” attitude toward academic achievement than schools with the least poverty (i.e., those with 10 percent or fewer eligible). In addition, the highest poverty schools in 2000 reported less parental involvement than schools with the least poverty. For example, the highest poverty schools were more likely to report less than 50 percent parent participation in open houses or back-to-school nights than schools with the least poverty (see supplemental table 11-2).

**POVERTY AND ACHIEVEMENT: Average scale score of public school students in 4<sup>th</sup>-grade mathematics, by the percentage of students in the school eligible for free or reduced-price lunch and whether the student was eligible for free or reduced-price lunch: 2000**

\*For the eligible student category, there were too few sample cases for a reliable estimate.
